

# MICROSOFT SHAREPOINT MODERN EXPERIENCE SITE USER - 1 DAY

## OUTLINE

In many professional environments today, people work collaboratively in teams. Information technology and applications facilitate this by allowing people to easily share, access, edit, and save information. Microsoft® SharePoint® is a platform specifically designed to facilitate collaboration, allowing people to use familiar applications and web-based tools to create, access, store, and track documents and data in a central location. In this course, you will learn about and use SharePoint to access, store, share, and collaborate with information and documents.

SharePoint is a complex platform with many features and capabilities. A strong understanding of those features and capabilities will allow you to work more efficiently and effectively with SharePoint, and with the documents and data stored in SharePoint. Furthermore, effective use of the Modern UI and Office 365™ integrations will streamline tasks and facilitate collaboration with colleagues in other Office 365 and third-party apps.

## COURSE CONTENT
